

Protect Your Ground Water

CHEMIGATION CHECK VALVE

What is it? Check valve, air/vacuum relief valve and low pressure drain

Who requires it? Federal Pesticide Label (federal requirement/state enforced) requires chemigation check valves for irrigation systems using well water

What does it do? Protects your well from backflow/back-siphoned contaminants

Benefits:

- Affordable protection
- Lightweight, easy to install and maintain
- Available in galvanized, epoxy-coated and stainless steel

Chemigation check valves are one component of a complete wellhead protection system.

Contact your County Ag Commissioner for complete details or check The Center for Irrigation Technology web site www.californiawater.org

Prevention is the key to protection
